RESEARCH INTERESTS	I develop statistical methods, tools and software for the analysis of genomics data. Specifically, my research addresses statistical challenges in epigenomics, functional genomics and single-cell genomics such as the pre-processing, normalization, analysis of raw, noisy high-throughput data (microarray and next-generation sequencing) leading to an improved quantification and understanding of biological variability. This work resulted in a K99/R00 grant from the National Human Genome Research Institute (NHGRI).
